**VISIPAQUE™**

**INDICATIONS AND CONTRAINDICATIONS**

**CLINICAL PARTICULARS**

**INDICATIONS**

- For single injections that may be repeated.
- To prevent acute renal failure following contrast media.
- To prevent acute renal failure following contrast media.
- Selective visceral i.a.DSA 270 mg I/ml 10-40 ml per inj.

**CONTRAINDICATIONS**

- Pre-existing renal impairment and diabetes mellitus as they are at risk for developing hyperthyroidism following injection of iodinated contrast media.
- Patients with acute cerebral pathology, tumours or a history of epilepsy are predisposed for seizures and merit particular care.
- Patients with acute cerebral pathology, tumours or a history of epilepsy are predisposed for seizures and merit particular care.
- Patients with acute cerebral pathology, tumours or a history of epilepsy are predisposed for seizures and merit particular care.
- A very few cases of arthralgia have been reported.

**ADVERSE REACTIONS**

- Vagal reactions giving hypotension and bradycardia are seen on very rare occasions.
- Vagal reactions giving hypotension and bradycardia are seen on very rare occasions.
- Vagal reactions giving hypotension and bradycardia are seen on very rare occasions.
- Vagal reactions giving hypotension and bradycardia are seen on very rare occasions.
- Vagal reactions giving hypotension and bradycardia are seen on very rare occasions.

**THERAPEUTIC USES**

- Intravascular use:
- Intravascular use:
- Intravascular use:
- Intravascular use:
- Intravascular use:

**PRECAUTIONS**

- Iodism or “iodide mumps” is a very rare complication of iodinated contrast media.
- Iodism or “iodide mumps” is a very rare complication of iodinated contrast media.
- Iodism or “iodide mumps” is a very rare complication of iodinated contrast media.
- Iodism or “iodide mumps” is a very rare complication of iodinated contrast media.
- Iodism or “iodide mumps” is a very rare complication of iodinated contrast media.
